

## CRED: Understanding Clinical Development Programme Day one

Time	Activity
09:20	<b>Registration and Coffee</b>
09:30	<b>Introduction to TOPRA</b>
09:35	<b>Welcome and Introduction</b> <b>Clinical Development in Context</b> <ul style="list-style-type: none"> <li>• Target product profile</li> <li>• Use 10-year development diagram, say where everything fits in</li> <li>• Why are clinical data needed?</li> <li>• Relevance of preclinical data</li> <li>• Definitions of Phases I, II, III and IV.</li> <li>• Clinical development strategy and the Clinical Development Plan</li> <li>• Sources of advice and timing</li> <li>• Need for a PIP</li> </ul>
09:50	<b>Clinical Pharmacokinetics</b> <ul style="list-style-type: none"> <li>• Objective a) to see how the drug is handled in man and b) to compare handling with that in animals in order to validate the animal studies.</li> <li>• May be necessary to generate additional data in animals if the differences are too great or the usual species is too sensitive e.g. use a different species, test a metabolite produced in man but not the animals species used.</li> <li>• Describe the different aspects that are investigated: absorption, distribution, metabolism and excretion and their relevance.</li> <li>• Definition and discussion of PK parameters, e.g. C<sub>max</sub>, t<sub>1/2</sub>, AUC, tissue distribution, mean residence time etc.</li> <li>• Outline the types of studies. Importance of using sufficient numbers of subjects and of sampling times.</li> <li>• Discuss analytical methods and their validation, e.g. use of radiolabelled drug, analytical methods such as HPLC or ELISA. Discuss the pros and cons.</li> <li>• Dose relationships, e.g. linear vs non-linear.</li> <li>• Problems with proteins, peptides – but still need to be examined.</li> </ul>
10:30	<b>Tea/ coffee break</b>
10:50	<b>Clinical Pharmacodynamics</b> <ul style="list-style-type: none"> <li>• First in human trials</li> <li>• guideline</li> <li>• Objectives of clinical pharmacodynamic studies</li> <li>• Mechanism/onset/duration of action</li> <li>• Examples of pharmacodynamic models</li> <li>• Different study designs</li> </ul>

Time	Activity
	<ul style="list-style-type: none"> <li>• Identification of sub-group differences e.g. disease-related, gender, age, race, geography (racial sub-populations)</li> <li>• Biomarkers</li> <li>• Practicalities of clinical pharmacodynamic studies</li> </ul>
11:30	<b>Panel Discussion</b>
12:00	<b>Lunch</b>
13:00	<b>Optimal Study Design – Objectives and Issues Relating to Phase II studies</b> <ul style="list-style-type: none"> <li>• Objectives of Phase II studies</li> <li>• “Proof of concept”</li> <li>• Design of Phase II studies</li> <li>• Definition of target patient population</li> <li>• Choice of end point(s)</li> <li>• Dose response</li> <li>• Initial identification of possible safety issues</li> <li>• Importance of keeping the target product profile in mind throughout</li> <li>• Adaptive design and accelerated development</li> <li>• Conditional approval</li> <li>• PRIME – mention orphan drug designation</li> </ul>
14:00	<b>Paediatric Investigation Plans</b> <ul style="list-style-type: none"> <li>• Legal framework</li> <li>• Why children are different</li> <li>• Preferred approaches to clinical development in children</li> <li>• Devising PIP strategy</li> <li>• Content and format of a PIP</li> <li>• PIP review process</li> <li>• Compliance Check</li> </ul>
14:35	<b>Case study and feedback session</b> <i>Tea to be taken in case study groups</i>
17:00	<b>Close</b>

**CRED: Understanding Clinical Development Programme  
Day two**

<b>Time</b>	<b>Activity</b>
<b>08:55</b>	<b>Introductory comments</b>
<b>09:00</b>	<b>Design of Clinical Trials to Support Proof of Efficacy (Phase III)</b> <ul style="list-style-type: none"> <li>• Confirmation of efficacy in the target patient population</li> <li>• Considerations for trial design e.g. control groups, duration of treatment</li> <li>• Long term safety data (circumstances when needed)</li> <li>• Choice of comparator (placebo vs active comparator)</li> <li>• Statistical issues – stats plan, primary and secondary endpoints, exploratory endpoints</li> <li>• Enlargement of the safety data-base to support the safety sections of the SmPC</li> <li>• Inclusion of quality of life (QoL) and other pharmaco-economic end-points to support pricing/reimbursement</li> </ul>
<b>10:00</b>	<b>Tea/ coffee break</b>
<b>10:30</b>	<b>Safety</b> <ul style="list-style-type: none"> <li>• Pharmacovigilance - aims and objectives</li> <li>• Definitions</li> <li>• Directive 2001/20 - day to day requirements, annual safety reports</li> <li>• Causality attribution</li> <li>• Risk management plans</li> <li>• PASS Studies</li> <li>• The SPC</li> <li>• Current EU Pharmacovigilance Legislation – mention Reference Safety Information (RSI) and new guidance</li> </ul>
<b>11:30</b>	<b>Panel discussion</b>
<b>12:00</b>	<b>Lunch</b>
<b>13:00</b>	<b>Case study and feedback session</b> <i>Tea to be taken in case study groups</i>
<b>15:15</b>	<b>The Perspective of a Regulatory Authority Reviewer</b> <ul style="list-style-type: none"> <li>• Specific examples of what regulatory agencies look for</li> <li>• Common problems with the clinical data in MAAs</li> <li>• Reasons for different views and decisions between regulatory authority reviewers</li> <li>• Obtaining regulatory agency input and appropriate timelines <ul style="list-style-type: none"> <li>○ CHMP scientific advice versus national agency advice</li> <li>○ Implementation of advice received</li> </ul> </li> </ul>
<b>16:00</b>	<b>Summary</b>
<b>16:30</b>	<b>Close</b>

*Delegates will be encouraged to ask questions throughout the day so as to ensure the meeting is as interactive as possible.*
